

TRABALHO 2

• DATAPATH

→ ADD, SUB, AND, OR, XOR, NOT, SLR e SHR

→ Next inst.

→ LD

→ ST

→ BhZR

→ ADDI

→ 31

ou

→ Acho que melhor

NOVAS INSTRUÇÕES

→ lwi: load upper immediate

↳ $r0 \leftarrow \text{addi} \ll 4$

Ou outro

↳ 3, 2...

SLA

Reg write - r0

→ Ver se vale mais:

↳ Fazer outro MUX: ↑ controle

↳ Ou fazer deslocador dedicado à operação

→ Método 2: lui

→ 1;

- * → JR : jump far & in register
 - ↳ $PC \leftarrow R[r_a] \Rightarrow$ talve 3 + complicate manter
 - ↳ Obs : sobra 2 bits

→ Inc

↳ Método ↓: Na VLA

↳ método 2: somador a parte

+ componentes!

$\hookrightarrow PC \leftarrow PC + R[ra] \Rightarrow$ saltos maiores

$\hookrightarrow$ obs: sobra 2 bits
